Clear Sample Data Guide

Remove the sample transactions, keep every formula, and start fresh safely. Read this BEFORE entering your own RRSP and spousal RRSP transactions.

THE GOLDEN RULE

NEVER right-click and choose “Delete rows.” That permanently breaks the ACB formulas in both portfolio tabs, the Attribution Tracker and the Dividend Tracker.

ALWAYS press the Delete key on the selected cells. It clears the values and keeps every formula intact across all 10 tabs.

8 STEPS TO CLEAR THE SAMPLE DATA

1. **Make your copy first**
   Click your template link, click “Make a copy,” and rename it “RRSP + Spousal RRSP Tracker 2026 — [Your Names].” Always work from YOUR copy in Google Drive.

2. **Open the Transaction Log**
   Click the Transaction Log tab at the bottom of the screen. It is the only tab with sample rows.

3. **Find row 4**
   Row 3 holds the column headers. Row 4 is the first sample transaction.

4. **Click cell A4**
   Click once on cell A4 to select it.

5. **Select all sample rows**
   Press Ctrl+Shift+End (Windows) or Cmd+Shift+End (Mac). This selects everything from A4 to the last sample row.

6. **Press the Delete key only**
   Press Delete. Not Backspace, and not right-click → Delete rows. All sample rows clear at once and every formula stays in place.

7. **Check the reset**
   Both portfolio tabs and the Main Dashboard should show $0. The Attribution Tracker should show “No spousal contribution” for every year, and the Dividend Tracker should show $0.

8 **Update Settings & Goals**
Fill in every amber cell: Active Year, Province, the contributor's name, income and RRSP room, the annuitant's name and income, and your retirement year.

ATTRIBUTION TRACKER: WHAT HAPPENS AFTER CLEARING

After you clear the sample data, the Attribution Tracker shows "No spousal contribution" for every year. As soon as you enter your own spousal RRSP contributions in the Transaction Log, it updates on its own and shows SAFE or AT RISK, plus the exact safe withdrawal date, for each year. There is nothing to type into the Attribution Tracker itself.

VERSION HISTORY: YOUR SAFETY NET

If something goes wrong: File → Version history → See version history. Find the version from just before the mistake and click "Restore this version."
