■■ Clear Sample Data Guide

Remove the 16 sample transactions · Keep all 6 portfolio tabs intact

Read this BEFORE entering your own data across all 5 accounts

The Golden Rule

■ **NEVER right-click and choose "Delete rows." This permanently breaks ACB formulas in ALL 6 portfolio tabs, the Attribution Tracker, the RESP Tracker, and the Dividend Tracker.**

■ **Press the Delete key on selected cells only. This clears all values while keeping every formula intact across all 15 tabs.**

7 Steps — Clear All Sample Data

1	**Make your copy first**	Click the template link, click "Make a copy," rename to "Ultimate Tracker 2026 — [Your Name]." Always work from YOUR copy in Google Drive.
2	**Open Transaction Log**	Click the Transaction Log tab. This is the ONLY tab with sample rows — all 15 other tabs read from it automatically.
3	**Find row 4**	Row 3 = column headers. Row 4 = first sample row. You should see 2026-01-02 · TFSA · Contribution · $7,000.
4	**Click cell A4**	Click once on cell A4 to select it.
5	**Select all sample rows**	Press Ctrl+Shift+End (Windows) or Cmd+Shift+End (Mac). This selects from A4 to the last sample row (row 19, Column M).
6	**Press Delete key ONLY**	Press the Delete key. NOT Backspace. NOT right-click Delete rows. All 16 rows clear instantly. All 6 portfolio tabs reset to $0. All formulas stay intact.
7	**Fill Settings & Goals**	Go to Settings & Goals. Fill ALL 30 amber cells before entering your first real transaction.
